

Trouble with toast?

Hi [restaurant owner],

Congratulations for topping the list of Tucson's "Best of the West" list in the brunch category!

A problem we hear about from restaurant owners like you is the aggravation of getting toast orders perfect for every customer during the morning rush - without wasting time or bread. The staff must adjust the dials on the toaster, slowing down production and causing the other slices to come out too light or too dark – only to be thrown away.

But our Advantage Kitchenware Toaster offers the solution to this dilemma with the "precise and targeted toasting" feature.

Does a toaster that makes the job easier for your staff and gives your customer the perfect toast every time seem like a "win-win"?

If the answer is "yes", let's schedule a live online demo so you can see this "toast trouble solution" in action and ask any questions.

Just use this [Calendly](#) link to pick a time that's best for your schedule.

I look forward to hearing from you.
